

# **JENKINS X**

## **PROGRESSIVE DELIVERY FOR KUBERNETES**

Carlos Sanchez / [csanchez.org](https://csanchez.org) / [@csanchez](https://twitter.com/csanchez)

# HEI

Cloud Engineer @ Adobe

Author of Jenkins Kubernetes plugin

Long time OSS contributor at Apache Maven, Eclipse,  
Puppet,...

# **PROGRESSIVE DELIVERY**

*Progressive Delivery* is a term that includes deployment strategies that try to avoid the pitfalls of all-or-nothing deployment strategies

*New versions being deployed do not replace existing versions but run in parallel for an amount of time receiving live production traffic, and are evaluated in terms of correctness and performance before the rollout is considered successful.*

Continuous Delivery is hard

Progressive Delivery makes Continuous Delivery easier  
to adopt

reduces the risk associated with Continuous Delivery

# **PROGRESSIVE DELIVERY TECHNIQUES**

# ROLLING UPDATES

# BLUE-GREEN DEPLOYMENT

# CANARY DEPLOYMENT

# **MONITORING IS THE NEW TESTING**

Know when users are experiencing issues in  
**production**

React to the issues **automatically**

**JENKINS X**

**kubernetes**

JENKINSX

# **TEKTON**

Pipeline engine in Kubernetes

Uses Pods and containers to run the pipeline steps

Implements ChatOps

Handles GitHub webhooks

Package manager for Kubernetes

# SKAFFOLD

Build Docker images with multiple backends:

- Docker build
- Kaniko
- Google Cloud Build
- Jib (Maven/Gradle)

Generates Dockerfile and Helm charts for your project

# **PROGRESSIVE DELIVERY WITH JENKINS X**

## Install Istio and **Flagger**

```
jx create addon istio  
jx create addon flagger
```

# Istio

Connect, secure, control, and observe services.

---

## Connect

---

Intelligently control the flow of traffic and API calls between services, conduct a range of tests, and upgrade gradually with red/black deployments.

---

## Secure

---

Automatically secure your services through managed authentication, authorization, and encryption of communication between services.

---

## Control

---

Apply policies and ensure that they're enforced, and that resources are fairly distributed among consumers.

---

## Observe

---

See what's happening with rich automatic tracing, monitoring, and logging of all your services.

# PROMETHEUS

A systems monitoring and alerting toolkit

# FLAGGER

[flagger.app](https://flagger.app)

*automates the promotion of canary deployments by using Istio's traffic shifting and Prometheus metrics to analyse the application's behaviour during a controlled rollout*

# Add the canary section to our application Helm chart values.yaml

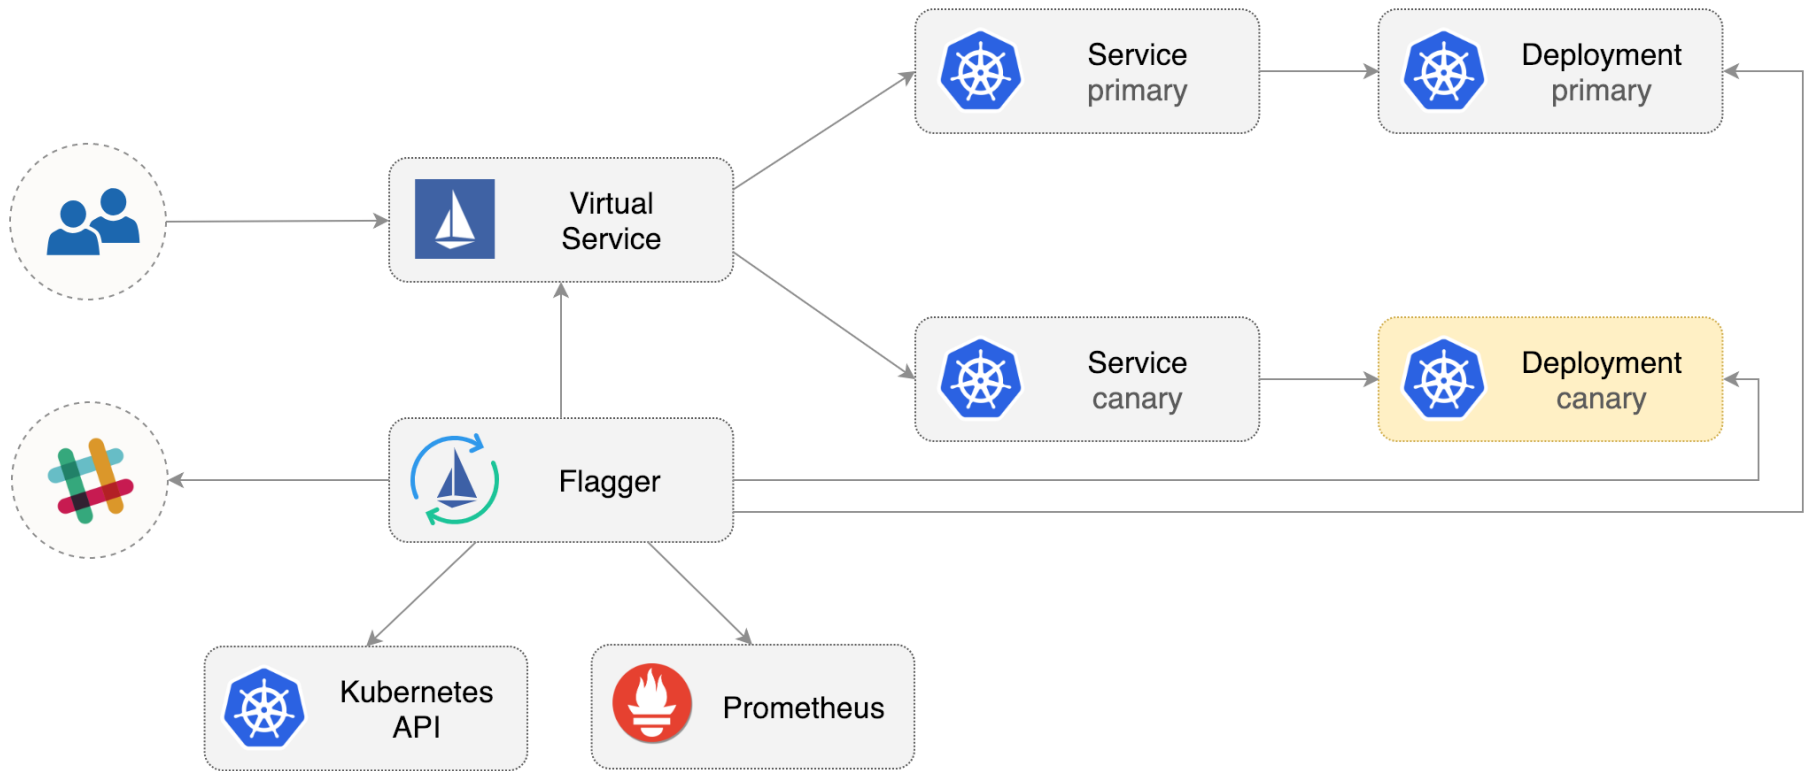

```
...
canary:
  enable: true
  service:
    hosts:
      - croc-hunter.istio.us.g.csanchez.org
    gateways:
      - jx-gateway.istio-system.svc.cluster.local
  canaryAnalysis:
    interval: 60s
    threshold: 5
    maxWeight: 50
    stepWeight: 10
```

metrics:

- name: `istio_requests_total`  
# minimum req success rate (non 5xx responses)  
# percentage (0-100)  
threshold: 99  
interval: 60s
- name: `istio_request_duration_seconds_bucket`  
# maximum req duration P99  
# milliseconds  
threshold: 500  
interval: 60s

# PROFIT!

```
jx promote croc-hunter-java \  
  --version 0.0.130 \  
  --env production
```
